kushagra.bainsla@sjsu.edu | +1 (408) 387-4802 | linkedin.com/in/kushagrabainsla/ | kushagrabainsla.github.io/ | San Jose, CA

Education

Master of Science in Computer Science, San Jose State University

Aug 2025 – May 2027

Relevant Coursework: Database Systems Principles, Cloud Computing, Graduate Technical Writing

Bachelor of Technology in Computer Science & Engineering, Kurukshetra University

Aug 2018 – Jul 2022

Relevant Coursework: Data Structures and Algorithms, Advanced Algorithms, DBMS, OOP, Computer Networks, Operating Systems, Agile, Software Development Lifecycle

Work Experience

Uniqode

Senior Software Engineer

Aug 2024 – Jun 2025

- Engineered and maintained backend systems for a **\$2M ARR** Digital Business Card platform, **achieving 99.99% uptime** while ensuring high performance, fault tolerance, and scalability.
- Built a scalable, **event-driven email automation system** using Celery and Gmail API (OAuth 2.0), enabling users to send delayed, personalized follow-ups from their own accounts, **boosting engagement rates by 36%**.
- Designed and implemented an **adaptive notification engine** using Celery and Python, improving message relevance by **40%** by dynamically selecting optimal delivery modes (immediate, digest, auto) based on real-time user engagement patterns.
- Designed and constructed a secure, scalable public **event ingestion pipeline** for Amplitude with request validation and transformation logic, **reducing analytics data loss by 97%** and improving data integrity across client platforms.
- Optimized logging infrastructure by **eliminating 4.2B** unnecessary logs/year through log-level tuning and filtering, reducing I/O overhead and **saving 300+ EC2** compute hours annually, while cutting Datadog **monitoring costs by \$12K/year**.

Software Engineer

Aug 2022 – Jul 2024

- Enhanced scalability and **cut public API latency by 42%** through query optimization and replacing Django defaults with custom, high-performance utilities, bringing **P95 latency consistently under 120ms**.
- Contributed to the backend migration of **analytics infrastructure** from Elasticsearch to Apache Pinot, optimizing real-time data querying and **reducing P95 query latency by 97.6% (25s to 600ms)**, while cutting **operational costs by 30%**.
- Constructed a high-throughput **email reporting pipeline** to generate and distribute weekly analytics for **200K+ products**, leveraging asynchronous processing to boost engagement and product discovery.
- Developed integrations with Azure AD and Salesforce CRM, **contributing to \$300K+** in annual enterprise revenue.
- Engineered a **flexible incentive system** integrated with Stripe to apply and expire usage-based rewards (e.g., feature unlocks, limits increase, plan upgrades) over billing cycles, **cutting churn by 34%** via automated, targeted retention strategies.
- Accelerated bulk upload (creation) and labeling workflows for **10K+** records by **12x** with optimized database operations, including batched inserts and query tuning, significantly enhancing scalability and throughput.
- Improved engineering onboarding by mentoring **3 backend interns**, **reducing ramp-up time by 30%**. Conducted **70+** technical interviews across all levels, and updated official documentation to support faster knowledge transfer and consistency.

Software Engineering Intern

Feb 2022 – Jul 2022

- Developed RESTful APIs for bulk operations, including CSV export and soft delete, optimizing data processing and **reducing bulk action completion time by 40%** through efficient query handling and asynchronous processing.
- Implemented an IP **threat monitoring service** to detect Tor, VPN, and bot activity, enhancing analytics security and enabling real-time threat detection with minimal performance impact.
- Reduced technical debt by resolving legacy bugs and **achieving 93%** average test coverage through comprehensive unit testing.

Let's Endorse Development

Summer Intern

May 2021 – Jul 2021

- Built modular dashboard components in React.js, **reducing time to track KPIs** and business metrics by over **10x**.
- Crafted **15+ screens** for a React Native delivery partner app, **optimizing user interfaces and workflows** to double user efficiency and significantly enhance the overall delivery partner experience.

Projects

Sentinel: Built an **email marketing/analytics** tool capable of handling **100K+** emails/month at under **\$50 infrastructure cost**. Designed bulk email delivery, real-time event ingestion, and engagement tracking powered by real-time analytics pipelines.

Build-flask-app: Created an **open-source CLI tool** to automate Flask project scaffolding, including WebSocket integration, database initialization, and testing frameworks. It **reduced developer onboarding time from hours to minutes** with consistent, production-ready templates and has **achieved 41K+ downloads** on PyPI, validating strong community demand and real-world impact.

Technical Skills

Languages: Python, JavaScript, TypeScript, SQL, C, C++, HTML, CSS, Shell scripting

Framework & Libraries: Django, DRF, Flask, Node, React, React Native, Angular, Express, Flutter, GraphQL, Froala, Playwright

Databases: PostgreSQL, SQLite, MongoDB, Redis, Apache Pinot, Elasticsearch, DynamoDB

Tools & Cloud: Git, Docker, Datadog, AWS (SQS, SES, EBS, S3, EC2, ECR, RDS, Lambda, Redshift, CloudFormation, Amplify, API Gateway, Cognito), Celery, Serverless Framework, GitHub Actions, Travis, Kubernetes, LaunchDarkly, Amplitude, Stripe, Sentry, Auth0, Nginx, Firebase, XCode, Hasura, Postman

Achievements

- Secured Rank **292** out of **100K+** participants in CodeKaze.
- Secured Global Rank **214** out of **18.5K**, India Rank **35** in LeetCode Biweekly Contest 73. (**Top 1.1%**)
- Secured a rank in the **top 2.8%** out of **28.9K** participants in ScalerCodeX 2.0.
- Earned the 2021 LeetCode Badge (**Top 0.12% globally**); peak rating **1963 (Knight)**, ranked in the Top **600** in India.
